Training batch
X: 32 windows
25 × 20 × 6
Draw k uniformly
from {0, 1, 2, 5}
(new draw per batch)
zero all 6 channels of k
random nodes, per window
Same model, unchanged:
GRU, 4 spatial layers,
classifier, soft vote
Loss, unchanged:
node-level
cross-entropy
update weights
Clip gradient,
AdamW step
example for k = 5 (schematic)
